Excerpt from *The Chemistry of Dairying: An Outline of the Chemical and Allied Changes Which Take Place in Milk, and in the Manufacture of Butter and Cheese; And the Rational Feeding of Dairy Stock*

These notes on Dairy Chemistry were originally prepared for classroom use in the School of Agriculture of the University of Minnesota. They are based on a course of lectures which have been given by the author, twice a year, for several years past.

The increased interest in dairy literature, together with the scarcity of works of this nature, has led to the belief that this work might be of sufficient value to warrant its publication. In its preparation free use has been made of the bulletins and reports of the agricultural experiment stations of the various states, and of the standard works dealing with milk and its products.

These notes have been prepared with the object of furnishing useful information to a class of young men who intend to become farmers and dairymen rather than scientific experts.

About the Publisher

Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com

This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
