Spatial Analysis Along Networks: Statistical and Computational Methods

Atsuyuki Okabe, Kokichi Sugihara

Spatial Analysis Along Networks: Statistical and Computational Methods Atsuyuki Okabe, Kokichi Sugihara

In the real world, there are numerous and various events that occur on and alongside networks, including the occurrence of traffic accidents on highways, the location of stores alongside roads, the incidence of crime on streets and the contamination along rivers. In order to carry out analyses of those events, the researcher needs to be familiar with a range of specific techniques. *Spatial Analysis Along Networks* provides a practical guide to the necessary statistical techniques and their computational implementation.

Each chapter illustrates a specific technique, from Stochastic Point Processes on a Network and Network Voronoi Diagrams, to Network K-function and Point Density Estimation Methods, and the Network Huff Model. The authors also discuss and illustrate the undertaking of the statistical tests described in a Geographical Information System (GIS) environment as well as demonstrating the user-friendly free software package SANET.

Spatial Analysis Along Networks:

- Presents a much-needed practical guide to statistical spatial analysis of events on and alongside a network, in a logical, user-friendly order.
- Introduces the preliminary methods involved, before detailing the advanced, computational methods, enabling the readers a complete understanding of the advanced topics.
- Dedicates a separate chapter to each of the major techniques involved.
- Demonstrates the practicalities of undertaking the tests described in the book, using a GIS.
- Is supported by a supplementary website, providing readers with a link to the free software package SANET, so they can execute the statistical methods described in the book.

Students and researchers studying spatial statistics, spatial analysis, geography, GIS, OR, traffic accident analysis, criminology, retail marketing, facility management and ecology will benefit from this book.

From reader reviews:

Horace Godbolt:

This book untitled Spatial Analysis Along Networks: Statistical and Computational Methods to be one of several books which best seller in this year, this is because when you read this guide you can get a lot of benefit on it. You will easily to buy this specific book in the book retailer or you can order it by using online. The publisher with this book sells the e-book too. It makes you easier to read this book, as you can read this book in your Cell phone. So there is no reason to you to past this e-book from your list.

Patricia Rhee:

The book untitled Spatial Analysis Along Networks: Statistical and Computational Methods contain a lot of information on this. The writer explains the woman idea with easy means. The language is very clear and understandable all the people, so do not worry, you can easy to read that. The book was published by famous author. The author brings you in the new era of literary works. You can easily read this book because you can read on your smart phone, or program, so you can read the book with anywhere and anytime. If you want to buy the e-book, you can available their official web-site and also order it. Have a nice study.

Brian Faber:

Beside this kind of Spatial Analysis Along Networks: Statistical and Computational Methods in your phone, it can give you a way to get more close to the new knowledge or details. The information and the knowledge you can got here is fresh through the oven so don't be worry if you feel like an older people live in narrow community. It is good thing to have Spatial Analysis Along Networks: Statistical and Computational Methods because this book offers for you readable information. Do you often have book but you would not get what it's all about. Oh come on, that will not happen if you have this within your hand. The Enjoyable set up here cannot be questionable, similar to treasuring beautiful island. So do you still want to miss the idea? Find this book as well as read it from today!

Shawn Hernandez:

As a college student exactly feel bored in order to reading. If their teacher inquired them to go to the library in order to make summary for some reserve, they are complained. Just minor students that has reading's soul or real their leisure activity. They just do what the educator want, like asked to the library. They go to right now there but nothing reading significantly. Any students feel that studying is not important, boring and also can't see colorful pictures on there. Yeah, it is to become complicated. Book is very important in your case. As we know that on this era, many ways to get whatever we would like. Likewise word says, ways to reach Chinese's country. Therefore this Spatial Analysis Along Networks: Statistical and Computational Methods can make you experience more interested to read.
