Citizen Science: Public Participation in Environmental Research

Citizen Science: Public Participation in Environmental Research

Citizen science enlists members of the public to make and record useful observations, such as counting birds in their backyards, watching for the first budding leaf in spring, or measuring local snowfall. The large numbers of volunteers who participate in projects such as Project FeederWatch or Project BudBurst collect valuable research data, which, when pooled together, create an enormous body of scientific data on a vast geographic scale. In return, such projects aim to increase participants' connections to science, place, and nature, while supporting science literacy and environmental stewardship. In *Citizen Science*, experts from a variety of disciplines—including scientists and education specialists working at the Cornell Lab of Ornithology, where many large citizen science programs use birds as proxies for biodiversity—share their experiences of creating and implementing successful citizen science projects, primarily those that use massive data sets gathered by citizen scientists to better understand the impact of environmental change.

This first and foundational book for this developing field of inquiry addresses basic aspects of how to conduct citizen science projects, including goal-setting, program design, and evaluation, as well as the nuances of creating a robust digital infrastructure and recruiting a large participant base through communications and marketing. An overview of the types of research approaches and techniques demonstrates how to make use of large data sets arising from citizen science projects. A final section focuses on citizen science's impacts and its broad connections to understanding the human dimensions and educational aspects of participation. *Citizen Science* teaches teams of program developers and researchers how to cross the bridge from success at public engagement to using citizen science data to understand patterns and trends or to test hypotheses about how ecological processes respond to change at large geographic scales. Intended as a resource for a broad audience of experts and practitioners in natural sciences, information science, and social sciences, this book can be used to better understand how to improve existing programs, develop new ones, and make better use of the data resources that have accumulated from citizen science efforts. Its focus on harnessing the impact of "crowdsourcing" for scientific and educational endeavors is applicable to a wide range of fields, especially those that touch on the importance of massive collaboration aimed at understanding and conserving what we can of the natural world.

From reader reviews:

Denise Rutledge:

Reading a book tends to be new life style on this era globalization. With studying you can get a lot of information that can give you benefit in your life. Along with book everyone in this world can certainly share their idea. Ebooks can also inspire a lot of people. A lot of author can inspire their own reader with their story or maybe their experience. Not only the storyline that share in the guides. But also they write about the ability about something that you need illustration. How to get the good score toefl, or how to teach your young ones, there are many kinds of book that exist now. The authors these days always try to improve their skill in writing, they also doing some investigation before they write for their book. One of them is this Citizen Science: Public Participation in Environmental Research.

Myrta Bundy:

Spent a free the perfect time to be fun activity to complete! A lot of people spent their down time with their family, or all their friends. Usually they undertaking activity like watching television, gonna beach, or picnic from the park. They actually doing same every week. Do you feel it? Will you something different to fill your current free time/ holiday? Might be reading a book can be option to fill your free time/ holiday. The first thing you ask may be what kinds of reserve that you should read. If you want to try look for book, may be the book untitled Citizen Science: Public Participation in Environmental Research can be fine book to read. May be it can be best activity to you.

Juanita Stoneman:

In this era which is the greater man or woman or who has ability to do something more are more precious than other. Do you want to become one of it? It is just simple way to have that. What you need to do is just spending your time little but quite enough to possess a look at some books. On the list of books in the top checklist in your reading list will be Citizen Science: Public Participation in Environmental Research. This book that is certainly qualified as The Hungry Slopes can get you closer in becoming precious person. By looking way up and review this book you can get many advantages.

John Lyons:

Do you like reading a publication? Confuse to looking for your chosen book? Or your book ended up being rare? Why so many issue for the book? But almost any people feel that they enjoy intended for reading. Some people likes studying, not only science book but novel and Citizen Science: Public Participation in Environmental Research or maybe others sources were given knowledge for you. After you know how the truly great a book, you feel desire to read more and more. Science e-book was created for teacher or students especially. Those textbooks are helping them to bring their knowledge. In other case, beside science reserve, any other book likes Citizen Science: Public Participation in Environmental Research to make your spare time a lot more colorful. Many types of book like here.
