## Bioinformatics: High Performance Parallel Computer Architectures (Embedded Multi-Core Systems)

New sequencing technologies have broken many experimental barriers to genome scale sequencing, leading to the extraction of huge quantities of sequence data. This expansion of biological databases established the need for new ways to harness and apply the astounding amount of available genomic information and convert it into substantive biological understanding.

A compilation of recent approaches from prominent researchers, **Bioinformatics: High Performance Parallel Computer Architectures** discusses how to take advantage of bioinformatics applications and algorithms on a variety of modern parallel architectures. Two factors continue to drive the increasing use of modern parallel computer architectures to address problems in computational biology and bioinformatics: high-throughput techniques for DNA sequencing and gene expression analysis?which have led to an exponential growth in the amount of digital biological data?and the multi- and many-core revolution within computer architecture.

Presenting key information about how to make optimal use of parallel architectures, this book:

- Describes algorithms and tools including pairwise sequence alignment, multiple sequence alignment, BLAST, motif finding, pattern matching, sequence assembly, hidden Markov models, proteomics, and evolutionary tree reconstruction
- Addresses GPGPU technology and the associated massively threaded CUDA programming model
- Reviews FPGA architecture and programming
- Presents several parallel algorithms for computing alignments on the Cell/BE architecture, including linear-space pairwise alignment, syntenic alignment, and spliced alignment
- Assesses underlying concepts and advances in orchestrating the phylogenetic likelihood function on parallel computer architectures (ranging from FPGAs upto the IBM BlueGene/L supercomputer)
- Covers several effective techniques to fully exploit the computing capability of many-core CUDA-enabled GPUs to accelerate protein sequence database searching, multiple sequence alignment, and motif finding
- Explains a parallel CUDA-based method for correcting sequencing base-pair errors in HTSR data

Because the amount of publicly available sequence data is growing faster than single processor core performance speed, modern bioinformatics tools need to take advantage of parallel computer architectures. Now that the era of the many-core processor has begun, it is expected that future mainstream processors will be parallel systems. Beneficial to anyone actively involved in research and applications, this book helps you to get the most out of these tools and create optimal HPC solutions for bioinformatics.

### **From reader reviews:**

#### **Arlene Oliver:**

The book Bioinformatics: High Performance Parallel Computer Architectures (Embedded Multi-Core Systems) make one feel enjoy for your spare time. You can use to make your capable considerably more increase. Book can to get your best friend when you getting stress or having big problem together with your subject. If you can make examining a book Bioinformatics: High Performance Parallel Computer Architectures (Embedded Multi-Core Systems) to become your habit, you can get far more advantages, like add your own capable, increase your knowledge about a few or all subjects. You can know everything if you like open up and read a book Bioinformatics: High Performance Parallel Computer Architectures (Embedded Multi-Core Systems). Kinds of book are several. It means that, science e-book or encyclopedia or other individuals. So , how do you think about this book?

#### **Lanell Sessions:**

Information is provisions for those to get better life, information presently can get by anyone with everywhere. The information can be a understanding or any news even an issue. What people must be consider any time those information which is inside former life are challenging to be find than now could be taking seriously which one works to believe or which one often the resource are convinced. If you find the unstable resource then you buy it as your main information we will see huge disadvantage for you. All of those possibilities will not happen throughout you if you take Bioinformatics: High Performance Parallel Computer Architectures (Embedded Multi-Core Systems) as your daily resource information.

#### **Mark Gallegos:**

The book untitled Bioinformatics: High Performance Parallel Computer Architectures (Embedded Multi-Core Systems) contain a lot of information on it. The writer explains the woman idea with easy technique. The language is very clear and understandable all the people, so do not really worry, you can easy to read this. The book was compiled by famous author. The author will take you in the new period of literary works. You can read this book because you can keep reading your smart phone, or product, so you can read the book in anywhere and anytime. If you want to buy the e-book, you can wide open their official web-site along with order it. Have a nice examine.

#### **Rose Heck:**

Reserve is one of source of understanding. We can add our knowledge from it. Not only for students and also native or citizen need book to know the up-date information of year to help year. As we know those ebooks have many advantages. Beside many of us add our knowledge, also can bring us to around the world. With the book Bioinformatics: High Performance Parallel Computer Architectures (Embedded Multi-Core Systems) we can get more advantage. Don't that you be creative people? To become creative person must like to read a book. Merely choose the best book that suitable with your aim. Don't always be doubt to

change your life with that book **Bioinformatics: High Performance Parallel Computer Architectures (Embedded Multi-Core Systems)**. You can more appealing than now.
