Renewable Energy (RE) sources differ from conventional sources in that, generally they cannot be scheduled, they are much smaller than conventional power stations and are often connected to the electricity distribution system rather than the transmission system. The integration of such time variable 'distributed' or 'embedded' sources into electricity networks requires special consideration.

This new book addresses these special issues and covers the following:

- The characteristics of conventional and RE generators with particular reference to the variable nature of RE from wind, solar, small hydro and marine sources over time scales ranging from seconds to months
- The power balance and frequency stability in a network with increasing inputs from variable sources and the technical and economic implications of increased penetration from such sources with special reference to demand side management
- The conversion of energy into electricity from RE sources and the type and characteristics of generators used
- The requirement to condition the power from RE sources and the type and mode of operation of the power electronic converters used to interface such generators to the grid
- The flow of power over networks supplied from conventional plus RE sources with particular reference to voltage control and protection
- The economics and trading of 'green' electricity in national and international deregulated markets
- The expected developments in RE technology and the future shape of power systems where the penetration from RE sources is large and where substantial operational and control benefits will be derived from extensive use of power electronic interfaces and controllers

The text is designed to be intelligible to readers who have little previous knowledge of electrical engineering. The more analytical electrical aspects are relegated to an Appendix for readers who wish to gain a more in depth understanding. The book's flexible structure makes it accessible to the general engineer or scientists but also caters for readers with a non-scientific background. Economists, planners and environmental specialists will find parts of the book informative.

From reader reviews:

Allison Price:

The book Renewable Energy in Power Systems can give more knowledge and also the precise product information about everything you want. Why then must we leave the good thing like a book Renewable Energy in Power Systems? A few of you have a different opinion about guide. But one aim in which book can give many facts for us. It is absolutely appropriate. Right now, try to closer with your book. Knowledge or info that you take for that, you may give for each other; it is possible to share all of these. Book Renewable Energy in Power Systems has simple shape however you know: it has great and massive function for you. You can look the enormous world by open up and read a guide. So it is very wonderful.

Louie Laforge:

This Renewable Energy in Power Systems tend to be reliable for you who want to become a successful person, why. The reason of this Renewable Energy in Power Systems can be one of the great books you must have is definitely giving you more than just simple reading food but feed anyone with information that perhaps will shock your earlier knowledge. This book is definitely handy, you can bring it everywhere and whenever your conditions both in e-book and printed ones. Beside that this Renewable Energy in Power Systems giving you an enormous of experience like rich vocabulary, giving you test of critical thinking that could it useful in your day action. So , let's have it and revel in reading.

William Black:

Reading can called brain hangout, why? Because when you are reading a book mainly book entitled Renewable Energy in Power Systems your thoughts will drift away trough every dimension, wandering in each aspect that maybe unfamiliar for but surely will become your mind friends. Imaging each word written in a guide then become one form conclusion and explanation this maybe you never get before. The Renewable Energy in Power Systems giving you a different experience more than blown away your brain but also giving you useful facts for your better life on this era. So now let us explain to you the relaxing pattern this is your body and mind is going to be pleased when you are finished studying it, like winning a. Do you want to try this extraordinary spending spare time activity?

Nicole Powell:

Reading a book being new life style in this season; every people loves to study a book. When you read a book you can get a lots of benefit. When you read publications, you can improve your knowledge, since book has a lot of information on it. The information that you will get depend on what sorts of book that you have read. If you want to get information about your study, you can read education books, but if you act like you want to entertain yourself you can read a fiction books, these us novel, comics, along with soon. The Renewable Energy in Power Systems provide you with new experience in studying a book.
