General Guidance on Risk Management Programs for Chemical Accident Prevention (40 CFR Part 68) U.S. Environmental Protection Agency

If you handle, manufacture, use, or store any of the toxic and flammable substances listed in 40 CFR section 68.130 above the specified threshold quantities in a process, you are required to develop and implement a risk management program rule issued by the U.S. Environmental Protection Agency (EPA). This rule, “Chemical Accident Prevention Provisions” (part 68 of Title 40 of the Code of Federal Regulations (CFR)), applies to a wide variety of facilities that handle, manufacture, store, or use toxic substances, including chlorine and ammonia and highly flammable substances such as propane. This document provides guidance on how to determine if you are subject to part 68 and how to comply with part 68. If you are subject to part 68, you must be in compliance no later than June 21, 1999, or the date on which you first have more than a threshold quantity of a regulated substance in a process, whichever is later. This guidance is intended for warehouses that handle or store chemicals; some of these warehouses may repackage chemicals, but most limit their activities to storing substances in containers designed to meet DOT transportation regulations. Information that is not applicable to warehouses has been omitted. If your warehouse is part of a larger facility that processes or uses chemicals or stores large quantities of chemicals for its own use, there will be information that is applicable to those other operations that is not presented in this document. For those operations, you should consult the General Guidance of Risk Management Programs or EPA’s other industry-specific guidance documents, as appropriate. This is a technical guidance document designed for owners and operators of sources covered by part 68. It will help you to: Determine if you are covered by the rule; Determine what level of requirements is applicable to your covered process(es); Understand which specific risk management program activities must be conducted; Select a strategy for implementing a risk management program, based on your current state of compliance with other government rules and industry standards and the potential offsite impact of releases from your process(es); and Understand the reporting, documentation, and risk communication components of the rule. This document provides guidance and reference materials to help you comply with EPA's risk management program regulations.
