This is the third volume of the very successful set. This updated volume will contain non-linear properties of some of the most useful materials as well as chapters on optical measurement techniques.

- \* Contributors have decided the best values for  $n$  and  $k$
- \* References in each critique allow the reader to go back to the original data to examine and understand where the values have come from
- \* Allows the reader to determine if any data in a spectral region needs to be filled in
- \* Gives a wide and detailed view of experimental techniques for measuring the optical constants  $n$  and  $k$
- \* Incorporates and describes crystal structure, space-group symmetry, unit-cell dimensions, number of optic and acoustic modes, frequencies of optic modes, the irreducible representation, band gap, plasma frequency, and static dielectric constant
